

## Updating the software of DAS20 – DAS40

You can easily update the software to get new functions. The update process requires a USB key.

The internal software is regularly updated with its latest evolutions. These updates are available on our Internet site.

<http://www.sefram.com/en/software-updates.html>

For the updating, copy the BIN file downloaded to a USB key. Place it on one of the USB connectors at the rear side of the appliance.

Push the  key twice, then select the parameter line « **Software update** » and

Validate with F1 « **Modify** ».

The internal software will automatically copy the required files in the new version.

Switch off and on the recorder to complete the update.
